

Collaborative Planning Implementation Procedures

Status:

In Progress

IWR Contact:

Lillian Almodovar (Lillian.Almodovar@usace.army.mil)

Purpose:

In order to more accurately reflect the needs and climate for water resources planning today, the Corps of Engineers has issued new guidance on Planning in a Collaborative Environment, EC 1105-2-409. The Corps traditional approach to water resources planning was designed to evaluate specific sites and projects. The traditional focus on project specific solutions causes concern due to the focus on National economic development benefits and on Corps interest rather than full Federal interest. EC 1105-2-409 reemphasizes current guidance and provides enhancements to the collaborative planning environment.

Objective:

Initial implementation procedures will be published in early 2006.
